This hybrid microgrid is composed of a 6 kWp photovoltaic system and two wind turbines of 3 kW each. It has two coupled 4 kW inverters that deliver power to a 230 V AC distribution line to which all the community loads are connected. Energy is stored using a VRLA 800 Ah, 48 V battery bank, which is designed to work at 50% DOD.

However, if 50% of energy consumption or more is unavoidably evening consumption, a battery completes the likelihood of bill reduction success. But size matters! For example, a Tesla Powerwall provides 13.5 kW of storage capacity, approximately half of a 10 kW solar energy system's daily generation (10 kW = approximately 30 kWh per day).
