A 150 watt solar panel will produce 150 watts an hour or 750 watts a day with 5 sunlight hours (150 x 5 = 750). With more sun hours, more watts. However it isn't that clear cut. 150 watts is the peak output for a 150W solar panel. It is the maximum power the module can produce when the sun is high above the horizon.

The best way to gauge how many solar panels you need, is to understand and define the power load needed from this system. Power is measured in Watts, and capacity is commonly measured in Watt-hours (multiplying power output in watts by the required number of hours of operation multiplied by a safety factor of 1.5-2).

The best way to gauge how many solar panels you need, is to understand and define the power load needed from this system. Power is measured in Watts, and capacity is commonly measured in Watt-hours (multiplying power output in ...
