A more economical approach is a 3:1 ratio. For example, a 3kw wind-solar hybrid system uses a 1kw wind turbine, a 2kw solar panel, and other accessories. In this way, the cost ratio will be reduced. A 1kw wind turbine generates an average of 1kwh per hour and is powered together with a battery bank (where solar power is stored during the day).

For example, a 3kW (3000 Watt) solar system is capable of producing 3000 Watts of power, or even more,

3kw solar power system Antigua and Barbuda

under the right conditions. If a 3kW solar system constantly produces 3000 Watts of power for one hour, it will have generated 3000 Watt-hours of energy by the end of that hour.
