

Air energy storage expander test

What is a compressed air expander?

In the compressed air systems, the expander plays a crucial role as it determines the performance of the system in terms of power output and efficiency. Many researchers have investigated various types of expanders for compressed air systems.

What is a 300MW compressed air expander?

The successful development of the 300MW compressed air expander stands as a significant milestone in domestic compressed air energy storage domain. Not only does it mark a turning point for advanced compressed air energy technology, but it also propels the nation's capabilities to unprecedented height.

What is CAES (compressed air energy storage)?

Recently, a major breakthrough has been made in the field of research and development of the Compressed Air Energy Storage (CAES) system in China, which is the completion of integration test on the world-first 300MW expander of advanced CAES system marking the smooth transition from development to production.

Why is air expander important in a CAES system?

Air expander is one of the key components in a CAES system because its operational characteristics determine the power conversion efficiency and the power generation during the discharge period. The performance of the expander contributes heavily to the round trip efficiency of the whole system.

How does a compressed gas expander work?

The potential energy of the compressed gas is transferred to mechanical energy of the shaft. In the expander, the timings of opening and closing the intake and exhaust valves can be controlled. For example, the intake valve of the expander opens when air reaches sufficient pressure in the cylinder.

How powerful is a small piston expander for compressed air?

Tenissara et al. experimentally tested a small-single piston expander for compressed air and evaluated its performance in terms of mass flow rate, the torque and rotational speed at inlet pressure ranging from 3 to 6 bar. They obtained maximum power of 581 W with the maximum rotational speed of 710 rpm.
