

# Algeria octopus battery

When should I charge my octopus battery?

Generally, we'd recommend to charge your battery between 02:00 to 05:00 each night and to discharge between 16:00 to 19:00 when it'll be more expensive to import energy. If you want us to control your battery for you (and you have a compatible battery), check out Intelligent Octopus Flux.

How does Octopus Energy work?

Power your home with 100% renewable energy on this Octopus Energy electricity tariff designed exclusively for solar and battery owners. How does it work? Octopus Flux is an import and export tariff optimised to give you the best rates for consuming and selling your energy and support the grid during peak periods.

Is octopus flux a symmetrical tariff?

Octo Flux is a three rate electricity tariff combining both import and export. Octopus Flux is a combination tariff, meaning it's made up of an import and export tariff. The symmetrical import/export tariffs have three price periods throughout the day. Is Octopus Flux a flexible tariff? Yes, it is a flexible tariff.

What happens if I leave octopus flux?

Once confirmed, we'll switch you to Octopus Flux. If you leave Octopus Flux and /or Octopus Energy your 'Generation Tariff' will remain the same and your 'export tariff' will be paid at the Smart Export Guarantee (SEG) rate offered by your new tariff /new supplier.

A community to share Octopus Energy news, innovations and money saving offers. ... A 5kW battery saving 25p/kWh would save you about £1/day for maybe 5 months of the year £1400 to save £150/year doesn't seem like an incredible investment, you'd take about 11 years just to break even and then you'd get a ~10% return

Recently got a quote from Octopus to install a 1.305kW system made up of 3\*435 watt panels (not much roof space), a 0.36 kW AC microinverter and a 5 kWh battery, but I confess the whole thing is well beyond me.

# Algeria octopus battery

Battery First mode means that the house will pull from the grid regardless of if the battery is at the required SOC or not and therefore not use any battery power. If the electricity price is higher than 110% of the minimum 30 minute price then it won't do this, it will stop charging and switch back to load first mode draining the battery to ...
