

Bangladesh aureus solar panel

The potential benefits of the AuREUS technology are manifold. Panels of this type are expected to be able to produce energy 50% of the time - much higher than the 15-22% of regular solar panels. Glass buildings and skyscrapers in city centres could potentially be completely covered in them, effectively turning them into huge vertical solar farms.

Using a typical 42 story building, AuREUS can capture solar energy using only less than 5% of the area that it would take using traditional solar farms. Manufacturing tests showed they can convert 1kg of waste crop into 108-watt peak of solar energy capture potential, and lastly, the AuREUS stands at +80% upcycling potential in terms of ...
