Hi all, my first post. I'm interested in researching using the Model 3 battery pack as a powerwall for home storage/supply of solar power. The Model 3 battery pack varied from the Models S and X batteries in that their battery packs could easily be broken down into 24v modules and so 2 in series would give the 48v that is standard within the solar industry.

With that solar array that you have, you can charge battery packs that have 140,000wh of capacity in 5 hours of sunshine. So the capacity of the battery in Amp hours is calculated by watt-hours divided by voltage, so for a 12v system that would be $140,000\text{wh}/12\text{v} = 11,666\text{Ah}$ of battery capacity, for 24v system = 5,833Ah, for 48v system = 2,916Ah.

It features a 12V solar panel and a rechargeable battery. Manufacturer Specifications: 1000mAh Li-ion Battery; 12V Amorphous Solar Panel works in low light conditions; Notification LED indicates battery level; 10 FT. insulated metal cable; Solar battery pack easily mounts to trees and posts with durable nylon strap and serrated brackets-included
