

How can Bolivia improve energy production?

Bolivia continues to make efforts to upgrade the infrastructure needed for renewable energy production. The National Interconnected System (SIN), which the government has put in place, aims to improve the nation's capacity for producing electricity by building additional power plants, transmission lines and substations.

How much power will Bolivia have by 2025?

More recently, Bolivia's national electricity company (ENDE) projected that by 2025, 74% of the installed capacity will be from hydropower, 4% from non-hydro renewables energy, 12% from combined cycle plants, and 10% from thermal power plants (ENDE, 2016). These projections, though, only take into consideration the SIN.

What are the potential development scenarios for the Bolivian energy system?

This study presents a general overview of the Bolivian energy system and an array of potential development scenarios based on a mix of management and goal-based measures. In a BAU scenario the energy demands would double in each sector in a period of 20 years, between 2020 and 2040.

What type of energy system does Bolivia use?

Similar to the country's total energy system, the power sector relies heavily on natural gas (AETN, 2016). The electricity network in Bolivia is broken into two classifications: the National Interconnected System (SIN) and the Isolated Systems (SAs).

Which sector consumes the most energy in Bolivia?

When expressed by sectors, the transport sector is the main energy consumer in Bolivia with a share of 49.0%, followed by industry 25.3%, residential 17.3%, commerce and services 3.8%. Total 3318.8 MW installed capacity.

What are the heating demands in Bolivia?

Residential heating demands in Bolivia are quite low, though they do notably increase throughout the transition as access to energy services increase, except for biomass for cooking, which is phased out by the end of the transition. Heating demands are projected to increase from 52 TWh in 2015 to 205 TWh in 2050. Fig. 12.
