

Burkina Faso energy saving products

What is the energy mix in Burkina Faso?

In 2019, Burkina Faso's energy mix was dominated by biofuels and wastes, with oil products accounting for one-third of the total energy supply. In 2020, 11% of the population had access to clean cooking and only 21% had access to electricity, making Burkina Faso one of the world's least-electrified countries.

Did Burkina Faso import energy?

Burkina Faso did not import energy. Energy sources, particularly fossil fuels, are often transformed into more useful or practical forms before being used. For example, crude oil is refined into many different kinds of fuels and products, while coal, oil and natural gas can be burned to generate electricity and heat.

What are the different types of energy transformation in Burkina Faso?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Burkina Faso for 2021. Another important form of transformation is the generation of electricity.

Does Burkina Faso have energy issues?

In Burkina Faso's Poverty Reduction Strategy Paper (PRSP) there is no specific mention of energy or environment issues. The current version (2009-2011) has chapters on "reduction of pollution" and on "sustainable management of natural resources" without reference to energy issues.

Why is Burkina Faso a low-electrified country?

In 2020, 11% of the population had access to clean cooking and only 21% had access to electricity, making Burkina Faso one of the world's least-electrified countries. For electricity, the country has a target of 95% access for urban areas and 50% for rural areas by 2030.

Are there stoves in Burkina Faso?

There are a number of improved stoves which were introduced in Burkina Faso at the end of the 1970s and the beginning of the 1980s. They take these aspects into account, and cost today around 5 30 years, they were not really to be found or used in the households at the onset of FAFASO.

C'est dans ce contexte que Faso Energy a vu le jour. C'est le premier fabricant de modules photovoltaïques au Burkina Faso, appelés communément plaques solaires. Une entreprise du Faso a fait une immersion dans les installations de cette société. Lisez plus.

She highlighted Burkina Faso's commitment to diversifying its energy mix and increasing the share of renewables in its grid. Recent reforms, including the liberalization of the energy sector, have attracted private investment, significantly boosting solar power capacity--from 64.71 MW in 2022 to 159 MW in 2024.
