Can solar power help Cambodia achieve national electrification goals?

Searching for alternative options, Cambodia joins a growing list of national governments who have come around to seeing solar and other distributed, emissions-free renewable energy resources as a cost-effective means of achieving national electrification, as well as national and international climate change and renewable energy goals.

How many energy projects are coming to Cambodia?

The Cambodian Cabinet approved four energy projects this past April, a US\$231 million hydroelectric power and three solar power projects with a combined, rated, maximum power capacity of 140 MW. The latter are expected to come online and dispatch power to the national grid by 2020 and 2021 in four different provinces.

How much electricity does Cambodia use?

Cambodia consumed a total of 2,650 megawatts of electricity in 2018, an increase of about 15% compared to 2017, according to the Ministry of Mines and Energy. Eighty-three percent of rural areas had access to grid power as of the most recent, publicly disclosed figures, leaving nearly 5 million Cambodians without access to electricity.

How does Cambodia generate electricity?

In addition to hydroelectric power generation, which accounts for well above half of national power capacity, Cambodia relies heavily on coal and other fossil fuels, increasingly liquid natural gas, for electricity generation and continues to subsidize exploration, production and consumption.

Who is responsible for energy development in Cambodia?

the Department of Energy Development (which is responsible for energy and electricity planning); the Department of Energy Technology (which covers energy efficiency, technical standards, and non-hydro renewable energy); and the Hydropower Department. 34 EAC. 2018. Report on the Power Sector of the Kingdom of Cambodia, 2018 Edition. Phnom Penh. 30.

Does Cambodia have solar power?

Solar power capacity has been on a sharp ascent in Cambodia recently, increasing at a 10% annual rate from less than 1% of national generation capacity, however. Some 400-MW of solar-fueled power capacity is now connected to the national grid, according to the Department of Mines and Energy.
