

What was the Dominican power sector like before the 1990s?

Prior to the 1990s reform, the Dominican power sector was in the hands of the state-owned, vertically-integrated Corporación Dominicana de Electricidad (CDE). The operation of the company was characterized by large energy losses, poor bill collection and deficient operation and maintenance.

What is the current condition of the Dominican energy sector?

The PEN presents the current condition of the Dominican energy sector while outlining its future development. The DR's installed generation capacity connected to the National Interconnected Electric System (Sistema Eléctrico Nacional Interconectado - SENI) is around 5,631.47 MW and the average peak demand is around 3,312 MW.

Is the electric power sector affecting the Dominican economy?

Despite the present administration's efforts to increase the installed capacity of electricity generation from renewable sources, the electric power sector continues to be one of the most significant problems affecting the Dominican economy.

Is the Dominican Republic's power sector a bottleneck to economic growth?

The power sector in the Dominican Republic has traditionally been, and still is, a bottleneck to the country's economic growth.

How is electricity generated in the Dominican Republic?

Electricity generation in the Dominican Republic is dominated by thermal units fired mostly by imported oil or gas (or liquefied natural gas). At the end of 2006, total installed capacity of public utilities was 3,394 MW, of which 86% was fossil fuels and 14% was hydroelectric. The detailed share for the different sources is as follows:

Is the World Bank financing the Dominican Republic power sector reforms?

The World Bank is also financing the Second Generation Power Sector Reforms of the Dominican Republic Power Sector Program through US\$150 million of financing in the period 2005-2008.
