

How will Cyprus achieve a higher share of renewables?

Cyprus has set out to attain a higher share of renewables, and this roadmap helps to assess optimal investment strategies in the power sector. Solar PV and wind power will play a major role in the roadmap to 2030. Roadmap findings will play an important role to revise existing energy policies and develop new ones.

How does Cyprus support the energy sector?

For the heating and cooling sector, Cyprus supports solar thermal and use of heat. Finally the transport targets are planned to be met through electrification of transport and use of biofuels.

How does Cyprus generate electricity?

Cyprus supports PV and biogas/biomass for electricity production, while it also leans on onshore wind to achieve RES targets. Most RES electricity is connected through net-metering where it assumes energy is used for own consumption and surplus injected to the grid. Cyprus is currently not interconnected.

What are Cyprus' energy goals?

For the heating and cooling sector, Cyprus foresees a target of 39.4%. In the transport sector, Cyprus plans to achieve 14% share of renewable energy by 2030. Cyprus supports PV and biogas/biomass for electricity production, while it also leans on onshore wind to achieve RES targets.

Why does Cyprus have a high electricity price?

Cyprus has one of the highest electricity prices in Europe, due to high reliance on liquid fuel for power generation. However, a major transition is imminent for electricity supply. On one hand, indigenous natural gas discoveries are to be developed in the coming years.

Can a long-term energy planning model be used in Cyprus?

In order to examine options for economically optimal deployment of renewable energy in Cyprus under different scenarios, and to understand the potential impact of key policy decisions on the power generation mix, a long-term energy planning model of the current power system in Cyprus was developed.
