Energy Imports Net (% of energy use): It is estimated as energy use less production, both measured in oil equivalents. A negative value indicates that the country is a net exporter. Energy use refers to use of primary energy before transformation to other end-use fuels, which is equal to indigenous production plus imports and stock changes, minus exports and fuels supplied to ...

threaten the green energy transition globally. Conflicts, poor governance, and backlash by affected communities in producing countries could make it harder to develop new resources needed for green energy. This could slow the energy transition through supply bottlenecks and price volatility. Moreover, mounting consumer and investor
