Where would you do to save your data for a long term (up to 20/30years) WITHOUT maintenance. And need to be user friendly, forget LTO tapes, keep it simple. I've successfully read CDs with 23 years recently, without no issues. Optical data storage seems safe for me, and blu-ray theoretically are even better than CDs/DVD, they don't bend easily.

It is also cheaper than other long-term data storage solutions and avoids rare earths and complicated moving parts, as we just need ceramic nano-coating and glass, which we can produce in large quantities. Our technology is thus very scalable and works reliably--there's no merit to having a great idea or technology if you can't scale it.

I am currently trying to think of a long-term storage solution that a "fairly" non-technical person could retrieve photos and video from 30 to 40 years from now. I am attempting to build a generational digital archiving solution that would allow my currently young children (and potential grandchildren) to access the photos and videos that we ...

Personally I would do one cloud backup for long-term storage on Amazon AWS Glacier Deep archive. That data is not available on a daily basis and if you ever need it will cost you several hundred dollars to download, but it's your last resort. And then I'd buy at least 3 Western Digital Red 6TB drives and mirror the data on them.

There are several types of long-term data storage that are popular including optical discs, external hard drives, SSDs, cloud storage, and flash drives. While the method of storage is important, you also want to remember storage best practices like keeping them in a safe place, making backups, and being careful when moving or transporting the data.

Long-term data storage and cloud archiving formats. Another consideration when contemplating long-term cloud storage and archiving is that of data format. Keep in mind that a company archiving electronic data for 30, 50, or 100 years must worry about the ability to view the data decades into the future.

Until now my photos have been jumping CDs to HDD and I am at a crossroads again weather to switch from HDD to SSD or HDD are still better for cold storage long term. I did fair bit of research and I am aware Optical Media would be my best bet, namely M Disk or BD disks. Unfortunately where I live I cannot source them reliably and affordably enough.
