Specifically for Nepal, regional data accuracy enhancement procedure was applied. Uncertainty of the solar resource data has been reduced by the regional model adaptation based on the ground measurements collected at solar meteorological stations, located across the country. GIS data is provided in higher spatial resolution and also as long-term monthly averages.

Data repository for measurements from 5 automated solar stations in Nepal. Data will be uploaded in batches, on a monthly basis, and will transmit daily reports on 1 minute average values for solar radiation levels, temperature, air pressure, liquid ...

Solar water heating (SWH) is a process of heating water using sunlight and a solar thermal collector. Solar water heaters are widely used for residential and some industrial applications. A Sun-facing collector heats a working fluid that passes into a storage system for later use. Solar water heater can be active (pumped) and passive (convection-driven). They use water only or ...

Importance of Solar Energy in Nepal in 2024. Solar energy in Nepal presents a promising avenue to diversify the country's energy mix. Currently, Nepal's domestic electricity supply is almost entirely reliant on hydropower, which is susceptible to seasonal variations and the impacts of climate change, such as altered rainfall patterns and reduced snowmelt.

The Thatichaur Solar Microgrid, installed by Peak Power and Sunshine Energy in Kushe Rural Municipality, Nepal, utilizes an SMA Multicluster system to provide reliable energy to the community. This microgrid interconnects 249 households through smart meters, ensuring efficient energy distribution.

Objective: To increase the supply of solar electricity and reduce CO 2 emissions through investments in on-grid (solar rooftop systems) and off-grid (solar irrigation pumps, solar mini-grids) Photovoltaic (PV) systems. Project Management: The Project is being implemented by the Project Implementation Unit (PIU) established by AEPC. The PIU has been implementing the project ...
