

How has Ecuador's energy consumption changed over the years?

Ecuador's energy production increased by a compounded growth rate of 0.5% per year from 2011 to 2021, and renewables accounted for most of the increase. The country's energy consumption also increased by a compounded growth rate of 0.5% per year over the same period, down from 4.9% per year the decade prior.

How is energy used in Ecuador?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Is there a potential for electricity generation in Ecuador?

Based on what has been described, it is identified that there is a high potential for electricity generation in Ecuador, especially the types of projects and specific places to start them up by the central state and radicalize the energy transition.

Why is the Ecuadorian electricity sector considered strategic?

The Ecuadorian electricity sector is considered strategic due to its direct influence with the development productive of the country. In Ecuador for the year 2020, the generation capacity registered in the national territory was 8712.29 MW of NP (nominal power) and 8095.25 MW of PE (Effective power). The generation sources are presented in Table 1.

How much power does Ecuador need a year?

Electricity demand grows by 200 MW every year, meaning Ecuador should add 250 MW or 300 MW of new power generation each year. However, Ecuador has added minimal additional generation in the last three years.

What is Ecuador's Plan Nacional de eficiencia energética 2016-2035?

Ecuador's Plan Nacional de Eficiencia Energética 2016-2035 aims to promote energy efficiency and the development of renewables. In October 2020, Ecuador joined the EITI (Extractive Industries Transparency Initiative) to promote accountability and be more transparent regarding their natural resources and earned revenue.

Moreover, according to the U.S. Energy Information Administration, Ecuador was the 11th largest supplier of crude oil imports to the United States in 2012 and an important supplier of crude to the Western United States.<sup>1</sup> Rafael Correa, elected President three times by voters in Ecuador, has proved to be one of the nation's most enduring leaders.

In Ecuador, The Energy Efficiency National Plan 2016-2035 presents an inter-sectoral plan for energy efficiency, policies in transport, industry, residence, production, generation and all energy consumption

sectors.

1 &#0183; Ecuador's energy crisis has focused attention on its under-performing hydroelectric dams built by China's state-owned enterprises. By Martin Brown . December 20, 2024.

Hydroelectric power has long been an important source of energy in Ecuador, with the country's numerous rivers and waterfalls providing ample opportunities for hydroelectric power generation. According to IRENA, Ecuador has the potential to generate over 15,000MW of hydroelectric power, which is more than 5 times the country's current ...

Ecuador's energy outlook has undergone a drastic change in recent times. The country is fast moving from conventional sources of energy to more clean, renewable-based energy. There is a shift from a heavy reliance on fossil fuels to nearly complete self-sufficiency through renewable energies, particularly hydroelectric power.

Around 72% of Ecuador's energy matrix hinges on water, Calero said that 838 extra megawatts were expected to be added between November and December, reaching a total of 1,431 megawatts until April ...
