

Emerging energy solutions Norway

What is energy transition Norway?

Energy Transition Norway is Norway's only energy cluster that encompasses the entire sector's value chain. We bring world-leading technologies and competence together to accelerate the energy transition.

Can Norway achieve a successful energy and climate transition?

The report notes that Norway's existing energy sector expertise can help it achieve a successful energy and climate transition. If the right policies are put in place, Norway is well placed to decarbonise a wide range of sectors through technologies such as electric vehicles, hydrogen, and carbon capture, utilisation and storage.

Why is Norway a good example of energy transition?

Norway is a particularly insightful case study as the country's simultaneous promotion of hydrocarbon and renewable energy production exemplifies the tensions found in many other energy transition contexts.

What do energy elites do in Norway?

Energy elites in Norway leave fossil fuels to work in renewables. Leaders and experts are key promoters of energy transitions. Key industry professionals are essential to structural shifts in energy industries. Elites promote societal changes by encouraging others to follow suit.

What does EM Energy Solutions do?

EM Energy Solutions is a global company that designs and manufactures world-leading clean technology to improve power quality and energy efficiency. The head office is located in Trondheim, Norway. The core idea behind their solutions is improved power quality and energy efficiency.

Is there a 'energy utopia' in Norway?

Noting often that there is no "energy utopia" - not even in Norway - the leaders and experts introduced in this article saw a continued and pressing need to advance energy transitions; whether in a carbon-intensive field like Fredrik, or in the renewables sector like other oil-leavers.

Battery cell production is emerging in Norway. Battery manufacturers focus both on producing batteries with today's technology and on researching and developing the batteries of tomorrow, particularly in light of the growing lack of raw materials worldwide.

Romania is rapidly emerging as a keyplayer in Europe's green energy landscape. The country is making ...

Low- and middle-income economies have invested \$2.2 trillion in their energy systems in 2023, marking a 35% rise over 2020 figures. But this growth was largely driven by China, which accounted for \$1.1 trillion last year. In contrast, other emerging markets have lagged on investment in their energy systems as well as in low-carbon solutions.

One of Norwegian Energy Solutions' focus areas is to generate a zero-emission value chain, and thus put Norway on the map for development of renewable energy. Through collaboration and building bridges between traditional and ...

The decision comes after Worrells was appointed as liquidator to Emerging Energy on 24 July 2024. Since 1 August 2024, Emerging Energy's REC registry account has been under control of the liquidators. The regulator said Worrells has since issued advice to creditors which indicates Emerging Energy ceased to trade around July 2023.

As stand-alone solutions, many emerging technologies are quite compelling, and adoption rates are accelerating in areas such as robotic process automation and the internet of things. Others, like additive manufacturing, artificial intelligence and blockchain, are still being explored for their potential to deliver business value at scale.
