Why should you choose a custom-built energy transfer station?

Our custom-built energy transfer stations feature a compact size and weight, and are engineered to easily transport through halls and stairways as needed, with minimum hassle. Available both pre-assembled or split in easy to assemble modules if required due to space and height restrictions. Forget about waiting for on-site fabrication contractors.

What is the Cat#174; Battery energy storage system (BESS)?

Expand your energy capacity and power resiliency with the Cat#174; Battery Energy Storage System (BESS). A new suite of commercially available battery technologies boosts power reliability, quality, and flexibility, and helps renewable energy source integration and energy savings.

What is cat compact energy storage system?

Supplement traditional mobile power solutions with the Cat Compact Energy Storage System (ESS), a new mobile battery energy storage system reducing noise and generator set runtime. Designed for easy worksite deployment, the Cat Compact ESS can be fully recharged in as little as four hours and can provide up to 127.9 kWh of capacity to the site.

What are thermal energy storage technologies?

Thermal energy storage technologies enable the desired heat or coldness to originate from centralised thermal generating facilities (with a higher system level efficiency due to shorter conversion and transmission chain) instead of a standalone on-board air conditioning system (with a lower system level efficiency).

What is a Danfoss energy transfer station?

High value engineered components designed to work together from Danfoss include controllers, pressure independent valves and heat exchangers. Our custom-built energy transfer stations feature a compact size and weight, and are engineered to easily transport through halls and stairways as needed, with minimum hassle.

Why is battery energy storage important?

Battery energy storage also enables participation in grid services markets to avoid costs or to receive financial compensation. Support site loads with a system having the scalability to grow with your operation as it leverages on-site generator sets and moves toward more renewable energy source incorporation.
