

Can silicone rubber be used as an insulator under heat-moisture aging?

A multi-stress life prediction model for silicone rubber under heat-moisture aging is proposed. Silicone rubber is extensively applied as a sheath for composite insulators due to its light weight and excellent anti-fouling properties.

Is silicone rubber a good insulator?

Silicone rubber is extensively applied as a sheath for composite insulators due to its light weight and excellent anti-fouling properties. However, prolonged exposure to heat-moisture environments can degrade silicone rubber, reducing its insulating properties.

Why is silicone rubber used in composite insulators?

Silicone rubber (SiR) has been widely used for the sheathing of composite insulators due to its excellent electrical strength, light weight, anti-fouling performance and other advantages. To date, the number of composite insulators has exceeded 10 million and some of the composite insulators have been in service for more than 20 years.

A novel phase-change composite based on silicone rubber (MVQ) containing n-octadecane/poly(styrene-methyl methacrylate) microcapsules were successfully obtained by mixing energy ...

Here, we present a simpler alternative to Dielectric Elastomers (DEs) generators, which allows energy storage and electricity generation: an optimized silicone rubber formulation that ...
