Akmal Irham, ...

What is a storage index?

Data ranges from 88 to 478. The chart has 1 Y axis displaying values. Data ranges from 67 to 1690. The Storage Index is calculated monthly and represents the annualised revenue of a storage asset based on the energy, capacity and ancillary services prices observed during that month.

How is the storage index calculated?

In other words, the calculated value assumes that the year consists of 12 repetitions of the same month; the Storage Index thus provides accurate information on how the specified month's prices impact the revenue of a storage asset. The Storage Index is calculated using COSMOS, Clean Horizon's sophisticated energy storage simulation tool.

How can energy storage support the global transition to clean electricity?

To support the global transition to clean electricity, funding for development of energy storage projects is required. Pumped hydro, batteries, hydrogen, and thermal storage are a few of the technologies currently in the spotlight.
