Saint Vincent and Grenadines receives high levels of solar irradiation (GHI) of 5.2 kWh/m<sup>2</sup>/day and specific yield 4.3 kWh/kWp/day indicating strong technical feasibility for solar in the country.<sup>3</sup> In 2021, 26.67% of the country's power demand was met through renewable sources.<sup>4</sup>

Population Size 110,049 Total Area Size 389 Sq.Kilometers Total GDP \$8.1 Million Gross National Income (GNI) per Capita \$7,340 Share of GDP Spent on Imports 55% Fuel Imports 6.2% Urban Population Percentage 53% Population and Economy

The Grenadines was also affected, as the lack of rainfall and very warm temperatures had all but dried up the limited supplies stored on the islands. On many occasions, water had to be taken by ferry, trucked, and then distributed on the islands. This further added strain to the already limited supply on the island of St. Vincent.

Solar energy serves as a solution to global decarbonisation efforts. However, true sustainability goes beyond tackling climate change and providing affordable clean energy. The solar sector is increasingly focused on its own sustainability and is committed to accelerating efforts to reduce the impacts across its complex value chain.

Over the course of September in Saint Vincent and the Grenadines, the length of the day is gradually decreasing om the start to the end of the month, the length of the day decreases by 21 minutes, implying an average daily decrease of 43 seconds, and weekly decrease of 5 minutes, 1 second..
