

# Frontier energy Kazakhstan

How can Kazakhstan achieve a sustainable power supply?

Kazakhstan's supply of power to consumers should be secure, equitable, and sustainable. This can be achieved through a combination of decarbonized baseload generation- using gas and nuclear power, and renewable energy capacities - including zero-carbon wind power and hydropower; harnessed by the frontier grid and digital solutions.

Is Kazakhstan at a crossroads in its energy sector?

Kazakhstan, a vast and resource-rich nation in Central Asia, is at a crossroads in its energy sector. With a growing emphasis on sustainability and a need to align with global decarbonization efforts, the country is embarking on a transformative initiative that aims to ensure the security and reliability of its energy supply.

Will Kazakhstan's role in the energy transition make a difference?

If Kazakhstan's role in the energy transition is limited to supplying minerals and manufacturing renewable energy equipment without improvements to occupational health, safety standards, labor rights and environmental conditions, it will perhaps make little difference.

Will Kazakhstan reach 15 percent of the energy mix by 2030?

Renewable energy technologies like wind turbines have passed the tipping point in terms of power output and cost. We welcome Kazakhstan's ambitious goal to increase the share of renewables to 15 percent of the energy mix by 2030- and look forward to delivering best-in-class solutions to help the country achieve this.

Should Kazakhstan adopt an energy security strategy?

Global trend of tightening carbon regulation presents yet another impetus for broader modernization and systemic reforms of energy sector in Kazakhstan. Kazakhstan should articulate and adopt an official Energy Security Strategy document, guided by these general observations.

Should Kazakhstan build a nuclear plant?

The plan to build a nuclear plant in Kazakhstan will be vital for meeting the long-term decarbonization target. It would not be possible to meet the growing demand for power and decarbonize the sector using renewable energy alone, as a foundation of balancing capacities and an advanced grid must be built first.

Kazakhstan took a series of steps this week to take advantage of ongoing disruptions and expand its role in the global energy market On Monday, the head of the country's state-run nuclear agency ...

1 &#0183; 2024 draws to a close, and it's the perfect time to thank all those who have supported and contributed to an incredible year for Frontier. As our extensive, c-suite energy network continues to grow and our acclaimed Global Summits and Member Events further embed themselves in the energy leaders' calendar, we're excited for what 2025 holds.
