

Gbr energy Brunei

Does Brunei use natural gas?

The majority of natural gas is exported. Nevertheless, the domestic natural gas utilisation still dominates the primary energy supply (80%). Oil covers the remaining 20% of primary energy supply. Brunei's total energy supply is declining in proportion due to low oil price in 2016 which makes Brunei hold their oil production.

Why is Brunei focusing on developing downstream energy industries?

The country is focusing on developing downstream energy industries by maximising economic spin-off potential from upstream production and assets. Brunei Darussalam aims to reduce its energy intensity by 45% in 2035 from the baseline year of 2005, in line with its regional commitment to the Asia-Pacific Economic Cooperation.

Which sector uses the most energy in Brunei Darussalam?

The total final energy consumption (TFEC) of Brunei Darussalam in 2015 was 0.81 Mtoe, with the transport sector having the highest energy demand at 0.31 Mtoe or 38.27% of the TFEC. This is followed by the 'others' sector (34.57%), industry sector (24.69%), and non-energy use (2.47%).

What percentage of Brunei's GDP is generated by the energy sector?

About 60% of Brunei's GDP is generated by the energy sector. This reflects the significant contribution of this sector to the country's economy.

What is the economic potential of Brunei Darussalam?

Brunei Darussalam is an economy with great economic potential. Its gross domestic product (GDP) in 2015 was US\$13.9 billion at constant year 2010. With a population of 416,500, Brunei's GDP per capita was US\$33,340 at constant year 2010. About 60% of Brunei's GDP is generated by the energy sector.

How can Brunei reduce energy consumption?

Brunei has implemented the National Appliance Standards and Labelling Regulation, which aims at reducing domestic energy consumption in order to enable higher exports of gas. The Energy Efficiency and Conservation Program envisages the reduction of energy use by 45% by 2035 based in 2005 level
