year. To increase the efficiency of solar panels, the angle of the panels must be variable and always perpendicular to the solar panel, tracking the sun's position in the sky [22,23]. As a result, a solar tracker that detects the sun's motion is sometimes used to receive the most solar energy and absorb maximum energy.

A 5 HP VFD (Variable Frequency Drive) solar pump is a type of motor controller that drives an electric motor by varying the frequency and voltage of the power supply. It is a modern solution for converting any existing water pump into a solar water pump. A VFD will switch the power supply to match the energy requirement of drive-driven devices, thus it saves energy and optimises ...
