Which solar panels are best suited to Ireland?

The former are photovoltaic (PV) modules and are best suited to Ireland. The latter work best in places with year-round sunshine, though technological enhancements mean they can be deployed here. Solar PV generates power during daylight hours, with about 75 per cent of its energy produced between May and September.

Will Ireland be in the solar Vanguard by 2025?

Based on watts per capita, Ireland will be on par with Germany and the Netherlands by 2025, predicts ISEA chief executive Conall Bolger. The Government's 2023 climate plan "has put us in the solar vanguard" - our 2030 target of 8GW matches the ambition of the largest solar producer in the world, Australia.

Will Ireland's unreliable weather deter homeowners from investing in solar?

Ireland's unreliable weather has not deterred homeowners from investing in solar, with more than 100,000 now selling power back to the grid. Photograph: iStock

Could Ireland be able to reduce electricity bills?

A typical household could reduce their electricity bills by EUR450 per year, and if done at scale Ireland could meet one-quarter of household electricity needs, a study by UCC's MaREI Research Centre found last year.

This event is particularly special as the last solar eclipse visible in Ireland occurred nearly two years ago on October 25, 2022. The partial eclipse will appear differently depending on where you are in the country, with the west coast expected to see almost half of the eclipse while Dublin will see around 20 per cent, according to Dr Niamh Shaw.
