

What is Uzbekistan's solar energy vision?

It outlines the sustainable energy environment solar energy could deliver and offers a timeline up to 2030. In this vision,Uzbekistan succeeds in maximising the benefits of solar energy capacity for both electricity and heat,making solar energy one of the country's major energy sources.

How much energy does Uzbekistan use?

Uzbekistan had a total primary energy supply ( TPES) of 48.28 Mtoein 2012. Electricity consumption was 47.80 TWh. The majority of primary energy came from fossil fuels,with natural gas,coal and oil the main sources. Hydroelectricity,the only significant renewable source in the country,accounted for about 2% of the primary energy supply.

What is a solar energy roadmap for Uzbekistan by 2030?

This section presents a solar energy roadmap for Uzbekistan by 2030. It is based on current measures being implemented in Uzbekistan to break down the possible barriers to solar energy deployment discussed in the previous section. It aims to facilitate the government's deliberation of its solar energy strategy and focuses on:

Who oversees the energy sector in Uzbekistan?

In Uzbekistan,the governance of the energy sector is overseen by key governmental bodies,primarily the Ministry of Energywhich was established in February 2019. This ministry is responsible for the implementation of state policies,regulations,and decrees across various energy subsectors including electricity,natural gas,and oil.

Does Uzbekistan have a solar power plant?

In Uzbekistan,HPP generation is counted as electricity produced from renewable energy sources (RESs). Despite the country's considerable solar energy potential,it has no industrial-scale solar power plants. Furthermore,as wind potential has not been studied sufficiently,there are also no industrial-scale wind farms.

Will Uzbekistan reach its maximum capacity of solar energy?

Nevertheless, a more comprehensive set of policies and support mechanisms will be required to reach Uzbekistan's maximum capacity of solar energy and further increase solar energy toward 2030. The government should consider bundling the range of actions needed to ensure the use of all types of solar energy resources.

En Irradia desarrollamos proyectos de ingenierÃ;a y servicios en el Ãmbito de la energÃ;a para la industria, la edificaciÃ;n y el transporte desde hace mÃ;s de 10 ...
