I have a pending solar installation with APSystems micro inverters. I need backup power for well & heat at least in case of power outage. I understand the solar will go dark in a power outage without battery backup, but I'm trying to make the best decisions for the future.

Otherwise, the installation cost of micro-inverters is high. c) Battery-based inverters: These are bidirectional in nature as they include both a battery and an inverter. These inverters can be off/on grid or hybrid depending on their UL rating and design. They are highly efficient with a constant power supply as they manage energy between the ...

The term "battery ready" is more of a marketing term used to up-sell a solar system. If you want energy storage in the near future, it is worth investing in a hybrid inverter, provided the system is sized correctly to charge a battery system throughout the year, especially during the shorter winter days.

Hi, I have an existing AC-coupled off-grid system, using an SMA SI5048 inverter/charger, and SB5000 with 5kW of Solar. I'm currently building a battery-electric locomotive for a miniature railway (another hobby...), and would love to be able to use the batteries in the loco to supplement the off-grid system (think V2G, but on a smaller scale).

This strikes me as a poor approach. You are going to need an inverter to convert the battery power to AC for use in your house. If you're planning to power your entire house, this inverter will likely be large enough to replace the function of your micro-inverters, meaning that you're roughly doubling your investment in inverters for no good reason.
