What is energy in Luxembourg?

Energy in Luxembourg describes energy and electricity production, consumption and import in Luxembourg. Electricity sector in Luxembourg is the main article of electricity in Luxembourg. Primary energy use in Luxembourg was 48 TWh in 2009, or 98 TWh per million inhabitants.

Is Luxembourg a net energy importer?

Luxembourg is a net energy importer; 81.5% of the electricity consumed in the country, for example, was imported from neighboring European countries in 2021. There was no decline in the climate change gas emissions (CO<sub>2</sub>) from year 2008 to 2012 in Luxembourg. There was no better efficiency in the use of electricity from 2008 to 2012.

How much wind power does Luxembourg have?

Wind power share was only lower than in Luxembourg in Latvia, Czech Republic, Finland, Slovakia, Slovenia and Malta. Wind power target capacity in 2020 is 131 MW and 3.6% of electricity. According to EWEA 300 MW of installed wind capacity in Luxembourg could cover up to 14% of the country's electricity consumption.

When did Luxembourg start constructing a nuclear power plant?

The 1970s energy crisis led Luxembourg to briefly consider constructing a nuclear power plant. In 1972 RWE and the government negotiated a project to build a 1,200 MW nuclear reactor along the Moselle river near Remerschen. In 1974 there were already signs that there was little support for the project among public opinion.
