Considering sodium ion batteries are not yet widespread, existing lithium ion solar batteries on the market are still great options for energy storage at home. What is a sodium ion battery?

What is a sodium ion battery?

A sodium ion battery uses sodium as a charge carrier. The internal structure of sodium ion batteries is similar to lithium ion batteries, which is why they are often pitted against each other. Sodium ion batteries are rechargeable just like lithium ion, lead acid, and absorbent glass mat (AGM) batteries. Learn more:

Which ion battery has the lowest energy density?

Sodium ion batteries have the lowest energy density out of the group, which means they take up more space than lithium ion batteries. NMC batteries have the highest energy density. A 10 kilowatt-hour (kWh) lithium ion battery will take up less space inside your home than a 10 kWh sodium ion battery would, even though they have the same capacity.

Are sodium ion solar batteries still available?

Sodium ion offerings from most manufacturers are still being developed and are not yet widely available today. In 2022, Bluetti announced a sodium ion solar battery for home use that is not yet available for sale, but is worth keeping an eye out for.

How much energy does a lithium ion battery store?

It can now store 3,000 megawatt-hours and is capable of providing 750 megawatts--enough to power more than 600,000 homes every hour for up to four hours. Lithium-ion batteries convert electrical energy into chemical energy by using electricity to fuel chemical reactions at two lithium-containing electrode surfaces, storing and releasing energy.

Is lithium ion battery safer than NMC?

With that said, LFP is safer than NMC because it can withstand higher operating temperatures, while also handling more power. Compared to sodium ion batteries, lithium ion batteries have been tested extensively and have a reliable track record in the solar industry.
