

# Madagascar keno energy

What will esogip do for Madagascar?

The ESOGIP will aid Madagascar's government to decrease energy loss, increase energy efficiency, raise the ratio of renewables in the domestic energy mix, develop its governance of the energy sector, and improve operational performance of Jirama, Madagascar's state-owned electric utility and water services company.

How much energy does Madagascar use?

Madagascar's energy balance shows that about 80% of its overall energy consumption is based on biomass (mainly firewood 68%, charcoal 10% and other biomass 2%), 17% on petrol (transport), 2% on electricity (hydropower and diesel power plants) and 1% on coal. Until today the petroleum products are all imported.

Does Madagascar have a strong energy network?

Of Madagascar's 27 million inhabitants, 63% live in rural areas according to data by the World Bank from 2018. This leaves the country with the difficult task of creating a stable, pervasive energy network in order to supply the majority of the population with electricity.

Does Madagascar have a potential for energy from biofuels?

There is potential for energy from biofuels using agricultural waste from the sugar sector. Jatropha is also being cultivated for its oil which is used variously in the biofuels industry. Only 1.9 per cent of Madagascar's hydroelectric power potential has currently been used (REEEP, 2012).

How many people in Madagascar have electricity?

Only 14 per cent of people in rural Madagascar have electricity, with the figure even lower in the south (Grand Sud). This lack of access to electricity remains a major obstacle to the country's development. Madagascar currently generates around half of the energy it needs from hydropower, whereas solar still only plays a minor role.

Does Madagascar need a hydroelectric power plant?

Much of Madagascar's renewable electricity supply is sourced from hydroelectric plants, which require substantial improvement in capacity potential. Developing and expanding the network of small hydroelectric power plants in particular is an opportunity that the energy sector must further explore.

The ESOGIP will aid Madagascar's government to decrease energy loss, increase energy efficiency, raise the ratio of renewables in the domestic energy mix, develop its governance of the energy sector, and ...
