

Namibia ennovi energy

Should Namibia invest in green hydrogen?

While oil and gas projects can offer immediate job prospects, the green hydrogen sector promises long-term jobs in renewable energy, technology, and innovation. A skilled workforce trained in both sectors could ensure that Namibia meets its energy demands while fostering sustainable development. 5.

Does Namibia need electricity?

Namibia is heavily dependent on imports for its energy supply. All fossil fuels (coal, fuels) must be imported. Despite the small population and the low electrification rate of 56%, only about 40% of the country's electricity needs can be met from its own generation capacities.

Can Namibia implement a transitional energy strategy?

Namibia has the potential to implement a transitional energy strategy that facilitates the gradual reduction of fossil fuel reliance while simultaneously increasing the production of renewable energy sources.

Does Namibia support a hybrid energy model?

The Honourable Mr. Tom Alweendo, Minister of Mines and Energy, has articulated Namibia's stance as one that supports a hybrid energy model. This model seeks to integrate both fossil fuels and green hydrogen, thereby promoting a balanced and sustainable energy portfolio.

What does NamPower do in the Namibian electricity market?

In the Namibian electricity market, NamPower was responsible for generation, transmission, distribution and the trading of electricity as well as supplying the end customer. For some years now, the Namibian government has been attempting to liberalise the market with a view to creating

How much does electricity cost in Namibia?

The 2021/22 base electricity price for large consumers (regional electricity suppliers, municipal utilities) and direct NamPower customers is 1.70 Namibia Dollar (NAD)/kWh (approx. 0.10 Euro/kWh). This means that the electricity price has more than doubled since 2011 (0.68 NAD/kWh - approx. 0.04 Euro/kWh).

Namibia: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO₂ - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.
