

Namibia mission energy

How does the government support Namibia's modern energy access goals?

Government supports Namibia's modern energy access goals through the increased use of economically viable and locally available Renewable Energy resources along with the expansion of the mini-grid roll-out that aligns with the SADC's mini-grid framework and Action Plan for Namibia.

Does Namibia require a Ministry of Mines & Energy approval?

Existing laws in Namibia require the Regulator to obtain Ministry of Mines and Energy approval for its decisions on the energy sector.

What type of energy is used in Namibia?

Overall, primary energy in Namibia is derived from liquid fossil fuels (petroleum, diesel, paraffin, and liquefied petroleum gas), biomass (charcoal, wood, and processed wood products), and coal. At present, renewables play a very small role in the non-electricity energy sector.

What is happening in Namibia's energy sector?

Namibia's energy sector has seen rapid development in a short period of time owing to five recent major oil and gas discoveries, which include the Venus-1X, Graff-1X, Jonker-1X, La Rona-1X, and Lesedi-1X exploration projects.

Why does Namibia need a new energy source?

As Namibia moves towards its goal of providing near-universal electricity access by 2030, it needs to find and harness new sources of energy. A related reason that calls for adequate, viable, and affordable energy options in rural areas is the level of rural-urban migration, particularly to Windhoek.

Does Namibia have a solar power plant?

The government, the ECB, and NamPower have all expressed interest in grid-connected solar and wind renewable solutions, and in May 2015, Namibia inaugurated its first-ever solar power plant - a 4.5 MW plant - which represents one percent of the country's current production of energy.
