When will Harbour Energy enter Norway?

This will be followed by drilling of the JDE prospect. Harbour Energy first entered Norway in March 2018 via acquisition of an interest in the PL038D licence holding the Grevling discovery, which lies approximately 28 kilometres northeast of the Armada facilities in Block 15/12A of the UK Continental Shelf.

What type of energy does Norway produce?

Norway is a large energy producer, and one of the world's largest exporters of oil. Most of the electricity in the country is produced by hydroelectricity.

Why is energy in Norway so important?

With North Sea oil production having peaked, disagreements over exploration for oil in the Barents Sea, the prospect of exploration in the Arctic, as well as growing international concern over global warming, energy in Norway is currently receiving close attention.

Will a partnership with Norway make the UK more energy secure?

“Our partnership with Norway will make the UK more energy secure, ensuring we are never again exposed to international energy price spikes and the whims of dictators like Putin.” The announcement comes days after Labour signed the first carbon capture usage and storage (CCUS) contracts in the UK. Read more:

Why do Norwegians use fossil fuels?

Fossil fuels act as a major economic boost in Norway, meanwhile driving down the domestic energy costs. Fossil fuels operations in Norway is also a large source of Norwegian's employment. It has been argued that Norway can serve as a role model for many countries in terms of petroleum resource management.

How many hydroelectric generating stations are there in Norway?

Norway's 1,166 hydroelectric generating stations provide between 98% and 99% of the country's power supply. Electricity generation in Norway is almost entirely from hydroelectric power plants. Of the total production in 2005 of 137.8 TWh, 136 TWh was from hydroelectric plants, 0.86 TWh was from thermal power, and 0.5 TWh was wind generated.
