What is a flexible energy storage power station (fesps)?

Firstly, this paper proposes the concept of a flexible energy storage power station (FESPS) on the basis of an energy-sharing concept, which offers the dual functions of power flow regulation and energy storage. Moreover, the real-time application scenarios, operation, and implementation process for the FESPS have been analyzed herein.

Can a shared energy storage concept perform dual functions of power flow regulation?

This paper proposes an FESPS developed on the basis of a shared energy storage concept, which can execute the dual functions of power flow regulation and energy storage.

What is the operation process of power flow regulation and shared energy storage?

The operation process of power flow regulation and shared energy storage of bus 1 after obtaining the solution to the bilevel optimization operation model is depicted in Fig. 9. During the periods of 01:00-05:00 and 23:00-24:00, the load is jointly supplied by the power flow transfer and the superior power grid.

What time does the energy storage power station operate?

During the three time periods of 03:00-08:00, 15:00-17:00, and 21:00-24:00, the loads are supplied by the renewable energy, and the excess renewable energy is stored in the FESPS or/and transferred to the other buses. Table 1. Energy storage power station.

How can energy storage system reduce the cost of a transformer?

Concurrently, the energy storage system can be discharged at the peak of power consumption, thereby reducing the demand for peak power supply from the power grid, which in turn reduces the required capacity of the distribution transformer; thus, the investment cost for the transformer is minimized.

What is pumped storage power station (PSPS)?

The pumped storage power station (PSPS) is a special power source that has flexible operation modes and multiple functions. With the rapid economic development in China, the energy demand and the peak-valley load difference of the power grid are continuing to increase.
