Over the years, we have become a popular business partner of many companies with our wide range of products and is evident by the growing sales and enquiries.

If the wind blows, the turbines can generate electricity. However, wind power only works if the wind turbines are turning. When the air is still, the turbines can't produce energy. This works out well, though, because wind generation is highest at night - the opposite of solar power. These two energies work together to produce the energy communities need.

A battery's energy capacity is typically given in MWh or kWh. A fully-charged 15kWh battery, for example, could supply 1kW of power continuously for 15 hours. State-of-charge (%) is a battery's level of charge relative to its total energy capacity. A cycle is the process of fully charging and discharging a (rechargeable) battery's energy capacity. The load you place on a battery will ...

Solar power. Though we see plenty of rain and clouds here in Western Washington, solar power promises a bright future for our region. In the past few years, more than 5,500 Puget Sound Energy customers have installed their own solar-energy systems. And the number of people going solar continues to grow.
