

Research hotspots of chemical energy storage materials

Which research topics are emerging hotspots in the field of est?

In the period from 2019 to 2021, two new research topics were added: lithium battery solid electrolyte fused metal technology and research on new energy vehicle battery charging systems. This indicates that these two technology topics may become emerging hotspots in the field of EST.

Which research materials demonstrate the progress in energy and storage technologies?

A few recent applicable research materials in Table 5 demonstrate the ongoing progress in energy and storage technologies through creative research, namely in HEDM compactness. Table 6 shows the performance evaluation which describes carbon-based nano nanoelectrode materials application and energy storage. Table 5.

Which type of energy storage has the highest percentage of publications?

In terms of percentage of publications, electrochemical energy storage has the highest percentage of publications, while electromagnetic energy storage exceeds chemical energy storage, with a continually increasing percentage of publications. The United States' publication volume in the field of EST is slightly lower than Europe's.

How many papers have been published on electrochemical energy storage in 2021?

In 2021, China alone published over 5000 papers on electrochemical energy storage, while the United States and Europe published around 1000 papers each. This indicates a high level of scholarly interest in electrochemical EST, with relatively consistent attention across different regions.

Why do we need a large-scale development of electrochemical energy storage?

Additionally, with the large-scale development of electrochemical energy storage, all economies should prioritize the development of technologies such as recycling of end-of-life batteries, similar to Europe. Improper handling of almost all types of batteries can pose threats to the environment and public health.

What is chemical energy storage technologies (CEST)?

Development of chemical energy storage technologies (CEST). In the context of this report, CEST is defined as energy storage through the conversion of electricity to hydrogen or other chemicals and synthetic fuels. On the basis of an analysis of the H2020 project portfolio and funding distribution, the report maps re

This paper analyzes the international cutting-edge research hotspots in the field of oil and gas storage and transportation engineering, the high-frequency keywords in CNKI database, ...

This review provides both a theoretical and technical foundation for developing high-performance battery materials in extreme environments. It contributes to advancing ...

Research hotspots of chemical energy storage materials

As the energy storage landscape evolves, new trends and research hotspots are continually emerging, reshaping the focus of both material development and evaluation strategies.

The aim of this report is to give an overview of the contribution of EU funding, specifically through Horizon 2020 (H2020), to the research, development and deployment of chemical energy ...

Energy storage materials and applications in terms of electricity and heat storage processes to counteract peak demand-supply inconsistency are hot topics, on which many ...

The goal of the present research is to provide a comprehensive review and assessment of various techniques to produce BH, from conventional methods to the latest ...

Batteries have experienced fast growing interests driven by new demands for covering a wide spectrum of application fields. The update of batteries heavily relies on ...

Energy storage and conversion are vital for addressing global energy challenges, particularly the demand for clean and sustainable energy. Functional organic materials are gaining interest as ...

Thermal energy storage (TES) technology is playing an increasingly important role in addressing the energy crisis and environmental problems. Various TES technologies, ...

The results show that, in terms of technology types, the annual publication volume and publication ratio of various energy storage types from high to low are: electrochemical ...

Energy Storage Materials is an international multidisciplinary journal for communicating scientific and technological advances in the field of materials and their devices for advanced energy ...

Graphene-based nanocomposites, holding the ability to unravel the limitations, have evolved exotic research hotspots in the arena of energy storage and conversions, such ...

Ali A, Shaikh M N . Recent developments in catalyst design for liquid organic hydrogen carriers: Bridging the gap to affordable hydrogen storage [J]. International Journal of Hydrogen Energy, ...

Abstract The aim of this report is to give an overview of the contribution of EU funding, specifically through Horizon 2020 (H2020), to the research, development and deployment of chemical ...

Abstract Ferroelectric energy storing is one of the most potential research hotspots in functional materials. To seek for better performance, current strategies are mostly ...

Research hotspots of chemical energy storage materials

Highlights o Analyzed 6,705 papers on electrochemical energy storage from the WOS database spanning 2011-2021 for a robust bibliometric study. o Conducted a macro-level ...

Mg-based solid hydrogen storage materials have advantages such as high hydrogen storage capacity, safety and reliability, low price, and abundant magnesium ...

The current research hotspots in the field of energy storage are lithium-ion batteries, sodium-ion batteries, supercapacitors, lithium-sulfur batteries, lithium-selenium ...

Reshaping the material research paradigm of electrochemical energy For a "Carbon Neutrality" society, electrochemical energy storage and conversion (EESC) devices are urgently needed ...

Energy storage technologies, which are based on natural principles and developed via rigorous academic study, are essential for sustainable energy sol...

This paper mainly studies the application progress of phase change energy storage technology in new energy, discusses the problems that still need to be solved, and ...

Sensible heat storage, latent heat storage, and thermochemical heat storage are the three most prevalent types of seasonal thermal energy storage. In recent years, latent heat ...

This article reports on the life cycle assessment (LCA) of a novel hybrid energy storage system (HESS) for stationary use. The system combines a vanadium redox flow ...

In the rapidly evolving landscape of electrochemical energy storage (EES), the advent of artificial intelligence (AI) has emerged as a keystone for innovation in material ...

His research interests included the following: a bio-based economy, CCS, intermittent energy sources, alternative transport fuels, energy system studies and modeling, ...
