

# Retech energy The Gambia

Is there a solution to energy problems in the Gambia?

Policy makers across Africa have been among the last to embrace RE as a solution to their energy problems. They are often locked into crisis management on a day-to-day basis. The country's policy makers need to be persuaded that RE has a real future in the energy mix of The Gambia. They need to demonstrate this by their actions.

What will the Gambia's future energy strategy look like?

This should form part of The Gambia's future energy strategy. High transmission and distribution losses (over 30% in The Gambia) worsen the energy security problem. They also deepen suppressed demand. Those with the ability to pay will turn to on-site generators. All these have economic, social and environmental costs.

Does the Gambia have a wind-related energy project?

There is limited experience in wind-related energy projects in The Gambia. Much of the early work was restricted to village water pumping projects. In the 1990s, the Department of Water Resources (DWR) actively promoted the use of wind pumps along coastal villages with support from the EU.

Why is energy important in the Gambia?

The availability of adequate, reliable, affordable and sustainable energy is a critical milestone in the socio-economic development of any country. While less than half of all households in The Gambia have access to electricity, over 90% are still dependent on solid biomass for cooking and heating. This has intensified poverty.

How will interconnected power infrastructure affect rural energy services in the Gambia?

The effect of a highly interconnected power infrastructure on rural energy services in The Gambia is uncertain, as most people will continue to rely on decentralised systems.

What are the main sources of energy in the Gambia?

Today, the main sources of energy in The Gambia are primarily firewood, electricity, petroleum imports, and Liquefied Petroleum Gas (LPG). But a number of renewable energy initiatives are in the works thanks to ongoing funding from individual countries as well as by multilateral institutions like the European Investment Bank (EIB).
