Azov wind farm was developed with an estimated investment of EUR132m (\$148m) made by Enel Russia. Enel Russia's subsidiary Enel Rus Wind Azov signed an agreement with the Eurasian Development Bank (EDB) for a loan facility of EUR9.5bn (\$145m) in November 2018.

How many wind farms will Russia have by 2024?

The nuclear energy company plans to commission wind farms with a total capacity of around 1.2 GW by 2024, NovaWind added. Choose your newsletter by Renewables Now. Join for free! The largest wind farm in Russia, the 210-MW Kochubeyevskaya, reached commercial operation in January, its developer NovaWind JSC announced this week.

But on the wide open plains and steppes of Russia, windmills were often the only way to grind the massive amounts of grain these agricultural areas produced. Unfortunately, few survive today (probably due to massive industrialization and "progress" in the post-war Soviet bloc) and there is little information about them in English.

For years they worked with the Dutch company Windlife and its Russian subsidiary Windlife Arctic Power to break ground on a wind farm along the region's Barents Sea coast. Those plans never materialized. But Enel

Please do not draw any conclusions from the years a windmill was constructed. For example, it is known that in Russia the post-based mills appeared much earlier than the smocks (15-17 centuries), but wooden buildings do not normally last that long. The oldest of the surviving mills can be referred to the 18th century maximum.

Let's begin with the post-based windmills (or stolbovka, stolbovaya melnitsa, stolbianka in Russian). In Russia, these mills are also called kozlovki or kozlovy mills; in Europe they are called German, as opposed to smocks, which are named Dutch mills. Post-based mills appeared before the smocks. But in Europe they were replaced by smocks and practically [...]

Our Russian windmill is of an early post-based design where the barn section at the top rotates around a central post moving the sails into the best place to catch the wind. Needing to rotate it was constructed to be very light housing only the windmill mechanism and because of this, it was unlikely to be used to store grain or flour.
