Think that's a viable explanation? Why keep it so secret? Norway has the boundaries around the island in their possession, right? The phosphorus deposit is on mainland Norway and easy to verify. The only documented phosphate mineral on Bouvet Island is apatite. I don't know how relevant that is, but it's another clue, and the plot thickens.

3YØJ container is now passing D4 Cape Verde! See below In 2 weeks it will arrive Montevideo before being forwarded to VP8. ****What's up this week?*** ***(I) Oct 16th 14:00 UTC - Open zoom meeting***...

The closest lands to Bouvet are more than 1000 miles away. Queen Maud Land of Antarctica is just over 1,000 miles and Cape Town is about 1600 miles away. Therefore living off of this island and depending on shipments could be quite the challenge. Bouvet Island is a frozen inactive volcano. The majority of the island is covered by a glacier!
