3 · The most innovative part of this project is the charging system. A PZT transducer array converts footstep pressure into electrical energy: Footsteps generate mechanical pressure on the PZT transducers. This mechanical energy is converted into electrical energy. The energy directly recharges the LiPo batteries, ensuring a sustainable power source.

The most recent installation of 39 x 415W solar panels at their Swindon site will produce more than 14,000kWh of renewable electricity per year helping to combat rising energy prices and net zero pressures. Save Energy, Save Money and Save Carbon. Seth Robinson, Senior Energy Consultant for SMARTech energy said "It has been a great project to ...

SMARTech energy wishes a very merry Christmas to one and all! As the world dashes towards the jolliness of Christmas and the annual office shutdown, it's the traditional time to reflect, celebrate, and acknowledge company achievements over the past year.
