

Solar home import New Zealand

How can solar power help New Zealand?

We're working with the sector on New Zealand's renewable energy and low-emissions transition. We're responsible for the governance and regulation of New Zealand's electricity industry. Solar power can help you become more self-sufficient, reduce your carbon footprint and reduce your energy costs.

Is going solar a good idea in New Zealand?

Going solar helps the environment - it creates clean, green energy and is a great way to reduce your carbon footprint. Going solar demonstrates your commitment to sustainability and will help New Zealand achieve its target of net zero greenhouse gas emissions by 2050. Is your property suitable for solar?

Can a three phase solar system import and export energy?

With a three phase solar system there may be instances when you will import energy on one phase while exporting energy on another phase. This is because all three phases operate independently of one another. You may want to ask your installer to check the loading on each phase as part of the installation process.

Can a solar energy system save you money?

If you have excess electricity, you can sell it back to your power company and lower your power bill. If you don't produce all of the power you consume, you will still reduce your power bill and save money. Also, it's likely that the price of electricity will rise, so a solar energy system will save you money in future.

Can Contact Energy install a solar meter?

Contact Energy advises that for customers looking to set up a solar system, it can install an import/export meter for either less or greater than 10kW output. Customers can apply via Contact's website. Buy-back rate: Customers will see the amount of distributed generation they're selling on their electricity bill, where applicable.

Does a grid connected Solar System add value to your home?

A grid connected solar system will either reduce or eliminate your power expenses, reduce your carbon footprint and add value to your home. Research in Australia estimates that every 1kWp of solar added to your home will increase the value by approximately \$6,500NZD.

Even though solar power's peak generation around midday does not align with peak electricity demand in New Zealand, every small solar system connected to the grid contributes.

If you plan on exporting excess electricity into the grid, you'll need to arrange for your power company to install an import/export meter, capable of recording the import and export usage to the network.

We import high-quality warranted products from reputable manufacturers so you can have confidence in your
