Still, despite the unprecedented growth of solar power in recent years, the world needs to triple its renewable-energy capacity by 2030. At the COP28 United Nations Climate Change Conference held in Dubai last year, all countries agreed that meeting this goal is necessary to keep the 1.5°C Celsius target for global warming within reach.

Solar radiation, along with secondary solar resources such as wind and wave power, hydroelectricity, and biomass, account for over 99 per cent of the renewable energy options available globally. "There is an enormous amount of energy being radiated from the sun, and that energy comes in the form of heat and light.
