

Does the Czech Republic have a new energy policy?

The Czech Republic approved a new National Energy Policy (SEP) aiming to reduce energy consumption and improve the economy's energy intensity. However, reaching the targets of the SEP will require greater effort if the country is to play its part in the g

What is energy in the Czech Republic?

Energy in the Czech Republic describes energy and electricity production, consumption and import in the Czech Republic. OKD is a major mining company in the Czech Republic. Coal usage: 2019 40.9 Mt, 2020 31.5 Mt, 2021 31.4 Mt, 2022 35.1 Mt The country aims to phase out coal power by 2038 or earlier.

Where does the Czech Republic buy oil & gas?

The country is integrated into regional transmission systems and can purchase oil and gas from different countries based on market prices in Rotterdam or elsewhere. Most oil and gas are imported via Germany. The Czech Republic has two nuclear power plants at Dukovany and Temelin, which delivered over 31 TWh of electricity in 2022.

Why is natural gas important in the Czech Republic?

This reduction in gas consumption has significantly contributed to the Czech Republic being able to do without gas imports from Russia. However, natural gas will continue to play an important role in the Czech energy sector in the years to come. It will help replace coal in heating and help maintain grid stability in electricity production.

How is the Czech Republic preparing for the future?

The Czech Republic has taken another crucial step towards ensuring sufficient gas supplies for the future and replacing supplies from Russia. In cooperation with the government, CEZ Group has contracted long-term annual capacity of 2 billion cubic metres at one of the onshore LNG terminals in Germany.

Will Czech Republic phase out coal power by 2038?

The country aims to phase out coal power by 2038 or earlier. Oil and gas deposits in the Czech Republic are in Moravia. Crude oil from Russia comes through the Druzhba pipeline via Ukraine. The Ingolstadt-Kralupy-Litvínov pipeline can bring crude oil from Germany and be connected to the Transalpine Pipeline.

In terms of renewable energy, Czechia has set a 20.8% share of energy from renewable sources in gross final consumption of energy in 2030 as renewable energy contribution to the EU renewable energy target for 2030. This level of ambition is below the share of 23% in 2030 that results from the formula contained

Czechia is in the midst of an energy crisis. Like most of the EU, the country is suffering from a dependency on Russian energy sources; sanctions on Russia aimed at cutting this dependency following the invasion of Ukraine have turned the European energy market upside-down and Russian President Vladimir Putin is turning the screw by strangling gas ...

As lignite plants retire in Czechia, there is demand for new investments. Renewable energy will be needed to replace the lost power and also invest in conventional power sources to keep things running smoothly, especially the district heating system. Solar power is crucial for filling the gap left by retiring lignite plants.

In Czechia, electricity is produced mainly from coal (50%), nuclear energy (35%), and natural gas (5%) (2018). Therefore, fossil fuels still play a big role in the energy sector of the Czech Republic.
