Thailand: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO 2 - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

To achieve carbon neutrality by 2050, Thailand must expand its renewable energy sources, particularly solar and wind, while phasing out coal and reducing dependence on natural gas. Investments in energy storage and grid ...
