What are the implications of falling Bess prices?

We heard from system integrator, developer and EPC delegates at the Energy Storage Summit EU in London last month about the implications of falling BESS prices. As Energy-Storage.news reported last month, global prices for battery energy storage systems (BESS) have been on a downward trend since early 2023, having shot up in 2022.

How can energy infrastructure be improved in the Gambia?

Improving energy infrastructure is consistent with the EU "Agenda for Change" policy, which identifies energy as an essential driver of economic growth. The project will contribute to reducing the existing electricity supply gap in The Gambia using sustainable solar energy resources.

BESS can lead to significant energy savings, greater energy independence, and reduced carbon footprints. For businesses and utilities, the ability to manage peak loads and provide backup during outages adds an extra layer of value.
