Increasing energy costs and a drive towards net zero are encouraging the builders to shift from traditional buildings towards smart buildings. IoT smart buildings use sensors, cloud tech and IoT technology to remotely manage, monitor, and control a range of building systems from heating and air conditioning to lighting and security systems.

Why might you consider an Energy Performance Contract. Once an energy-saving opportunity has been identified, there are three main reasons a client may not progress with delivering the project. They may not have access to the upfront capital funding required to start the project, or the return on investment term might not be favourable for them.
