How much energy does Nepal consume?

Nepal consumed approximately 428 PJ (10,220 ktoe) of energy in 2010. New renewable energy sources, excluding large hydropower, such as biogas, micro-hydro, and solar energy, contributed about 0.7% to the national balance in 2008/09. Although the share is still small, it has increased by 40% since 2005.

What does the Ministry of energy do in Nepal?

The Ministry of Energy in Nepal was created in 2009 to manage Nepal's energy sector and develop energy resources to accelerate development. Its activities include policy design, planning, regulation, and research.

Why is Nepal so energy efficient?

With about 1 toe for every \$1,000 of GDP, Nepal has the poorest energy intensity among all south Asian countries. The country has therefore very large energy efficiency potential. Petroleum is the second largest energy fuel in Nepal after firewood and accounts for 11% of primary energy consumption in the country.

What is Nepal's wind energy potential?

Nepal has substantial wind energy potential, with estimates of over 3000 MW total capacity. Around 448 MW is commercially viable for electricity generation. Nepal's wind energy potential is concentrated in the high mountains and mid-hills regions, with favorable sites over 3,300 meters above sea level.

Why is energy consumption so low in Nepal?

In Nepal, most citizens have historically met their energy needs with biomass, human labor, imported kerosene, and/or traditional water-powered vertical axis mills. Per capita energy consumption is thus 'startlingly low' at one-third the average for Asia as a whole and less than one-fifth the worldwide average. Consequently, Nepal's energy situation is a significant challenge.

Does Nepal have long-term debt financing for energy projects?

According to a separate evaluation, Nepal lacks long-term debt financing for energy projects. The major lenders, the Agricultural Development Bank and National Commercial Bank, have already 'maxed out' their lending for microhydro, solar PV, and biogas.
