How much electricity does Tunisia get from renewable sources?

Tunisia aims to generate 30% of its electricity from renewable sources by 2030. The country currently gets only 3% to 6% of its electricity from renewable sources, mostly from wind and hydro. Solar energy capacity is at 35 megawatts (MW). In addition to wind and hydro, the Tunisian government plans to use biogas to produce renewable energy.

What is the future of energy in Tunisia?

In Tunisia, electricity is produced almost exclusively by burning natural gas, more than half of which is imported. This dependence poses a threat to energy security and is a strain on the national budget. At the same time, energy efficiency (EnEff) and renewable energy (RE) have enormous potential in Tunisia.

Does Tunisia have a solar power plant?

First utility-scale photovoltaic plant (10 MW, in Tozeur) was commissioned in 2019 on German money. Tunisia aims to generate 30% of its electricity from renewable sources by 2030. The country currently gets only 3% to 6% of its electricity from renewable sources, mostly from wind and hydro. Solar energy capacity is at 35 megawatts (MW).

What is the energy sector in Tunisia?

The energy sector in Tunisia includes all production, processing and transit of energy consumption in this country. The production involves the upstream sector that includes general oil and gas, the downstream sector that includes the only refinery in Tunisia and most of the production of natural gas, and varied electrical/renewable energies.

Should Tunisia establish an Energy Regulatory Authority?

Tunisia should also prioritize establishing an energy regulatory authority to help enforce performance standards and strengthen the financial viability of the sector and address the governance challenges, political instability, and insufficient government commitments that are impeding private sector engagement. ( Learn more about climate finance .)

Could nuclear energy be a viable alternative to fossil fuels in Tunisia?

The Tunisian government has partnered with Russia and France in hopes of establishing nuclear energy as a viable alternative to fossil fuels and taking up a nontrivial chunk of the energy production in Tunisia. This is expected to be accomplished in the 2020s. Sousse thermal power station, combined gas cycle belonging to STEG.

Below is a list of best universities in Tunisia ranked based on their research performance in Renewable Energy Engineering. A graph of 37.5K citations received by 2.35K academic papers made by 9 universities in Tunisia was used to calculate publications' ratings, which then were adjusted for release dates and added to final scores.

The AOC focuses on energy conservation, which saves utility funding, allowing savings to be reinvested into our buildings and infrastructure. The AOC has used energy performance contracting and energy savings over the past twelve years to fund more than \$200 million in building and infrastructure energy improvements. These investments have ...

Geographical Indications in Tunisia are a form of intellectual property available for 'natural or processed agricultural and food products'. [1] Geographical indications can be registered based on the Law No. 99-57 of June 28, 1999, on Controlled Appellations of Origin and Indications of Source of Agricultural Products [1] Registrations is possible as a Appellation of Origin ...

Its domestic renewable energy industry may just be getting back on track after years of delay, but Tunisia has already launched one of the most ambitious green hydrogen development programmes in Africa, which it is promoting together with longstanding electric power export schemes.

Since 2010, according to the International Energy Agency's World Energy Outlook 2020, Tunisia's energy generation capacity has expanded only 3.6 percent annually, while electricity consumption has increased at a ...

Tunisia's strategy outlines a comprehensive roadmap for the development of its green hydrogen industry. The plan includes a massive expansion of renewable energy, primarily solar and wind, to drive green hydrogen production. In addition, Tunisia will repurpose its existing natural gas pipelines to transport green hydrogen, connecting the country to European markets.
