How is Zambia's Electricity Market structured?

Table 1: Installed and Available Generation Capacity (MW) Zambia's electricity market is structured as a single-buyer market model with ZESCO acting as the unique off-taker and bulk retailer of electricity on the national interconnected system.

How much power does Zambia have in 2021?

Thus, the installed capacity in Zambia in 2021 is composed as follows: 2,705 MW in hydro-power (including 1,080 MW for the Kariba complex and 990 MW for Kafue Gorge), 330 MW in coal, 85 MW in diesel, 110 MW in heavy oil and 89 MW in solar. In total, about 84% of the installed capacity is renewable.

What is PV production & how does it work in Zambia?

In that case, the PV production is used to reduce the electricity bill and/or the diesel fuel bill. As of 2022, the cost of diesel in Zambia was around USD 1.5/litre (Global Petrol Prices, sd) and the efficiency of a generator varies between 25% and 35% if operated at at least 30% of its capacity (Skylas-Ka-zacos, 2012).

Does Zambia need hydropower?

In recent years, Zambia has been able to improve its electricity supply but remains largely dependent on hydropower. This dependency represents a risk to the security of supply, as evidenced by the return of scheduled load shedding at the end of 2022 until February 2023, due to low water levels on the Zambezi River.
